JCB 6M ELECTRIC COMPACT TELEHANDLER

Our fully electric JCB 6M telehandlers offer a low noise and zero emission solution to moving loads of up to 2500kg around site, whilst delivering the same performance you'd expect from a fuel powered telehandler.

The reduction in noise and emissions make them ideal for night work, residential areas, events, enclosed spaces and environmentally sensitive sites.

The JCB 525 60E can deliver a standard day's work from a single charge, with fast charging solutions available should you wish to top up the battery on longer shifts.

And with added safety features including load control, preventing forward tipping when handling heavy loads, as well as full telematic data to monitor performance and usage, our electric telehandlers offer the ultimate solution for noise and eco sensitive sites.

**ZERO
EMISSIONS**

STANDARD AND RAPID CHARGE OPTIONS

RAPID CHARGE CAN DELIVER A FULL BATTERY CHARGE IN UNDER 2 HOURS
