

External Butt Weld Bead Removal Tool 1200mm

The External Bead Removal Tool 1200 is a high quality tool designed for the removal of external beads formed as a result of the butt fusion welding process, for large diameter HDPE pipe sizes 710-1200mm.

The tool will peel the bead away from the pipe's surface whether it's hot or cold, leaving a flush finish and enabling the pipe to be smoothly slip-lined into a larger diameter pipe, as well as a closer inspection of the weld to detect potential defects.

Large blade for up to 60mm bead width.

FEATURES

- Simple and easy to use
- Adjustable guides for correct pipe diameter 710mm-1200mm
- Bead width up to 60mm
- Spare blade included

Code	Description
EWBRT60	710-1200mm Ø external debader
