

LINE TAMER®

Coiled Pipe Straightener and Re-rounder for 2" IPS through 6" IPS pipe

McElroy LineTamer

OVERVIEW

With the McElroy LineTamer®, you can quickly install coiled polyethylene pipe, conduit and duct. You can install an entire coil of pipe with a minimum of two fusion joints. The LineTamer cost-effectively straightens and re-rounds coiled pipe to meet or exceed ASTM D2513 ovality requirements.

The 3" to 6" IPS LineTamer comes equipped with 4" to 6" re-rounding rollers, with optional 3" to 4" re-rounding rollers also available. The unit is powered by hydraulic controls for ease of operation.

The 2" IPS LineTamer allows you to straighten and re-round 2" IPS polyethylene pipe, conduit and duct quickly with minimal training. Ball-thrust bearings make for easy roller adjustment to remove the coil set in the pipe for straightening.

Proper handling of coiled pipe requires the McElroy LineTamer to be mounted on a heavy-duty coil pipe trailer designed to work with the LineTamer. McElroy has worked closely with several OEM trailer manufacturers to provide complete trailer packages featuring the LineTamer.

FEATURES

- Straightens and re-rounds pipe
- Can install a full coil of pipe with only two fusion joints
- Removes coil set for speedy installations
